

## BUTTON GLASS RAILING

Button Glass Railing offers point or button supported railing that is exceedingly transparent.

The glass railing is considered a guard, therefore, must support loads of 50 lb. per linear ft. (distributed load) and 200 lb. point load **AT THE TOP OF THE GLASS**, glass must be thicker than other types of railing.

Glass that structurally meets building codes is available in either 3/4" monolithic or 13/16" laminated PVB or SGP.

Buttons are available in 304 (standard) and 316 Stainless Steel. Assist rails are also available, typically in 304 SS or 316 SS.

Hollaender offers fully engineered and tested railing systems that are properly anchored to the mounting surface.
