SMOKE BAFFLES (ALSO CALLED DRAFT CURTAINS)

Smoke Baffles are required in some buildings to limit the spread of smoke and provide adequate egress during evacuations.

Newman by Hollaender smoke baffles can be either mounted directly to the ceiling or can be concealed behind the ceiling.

In either case, installation is easy, and cladding can be selected to match the surrounding aesthetic.

Newman by Hollaender Smoke Baffles are engineered to meet NFPA (National Fire Protection Association) – Chapter 13 (Standard for installation of sprinkler systems) as well as IBC 2012 /712.1.3.1 Fire and Smoke Protection Features.
