

# ATLANTA HARTSFIELD-JACKSON AIRPORT WEST PARKING DECK

Atlanta, Georgia

Railing Design: Interna-Rail® Aluminum Railing

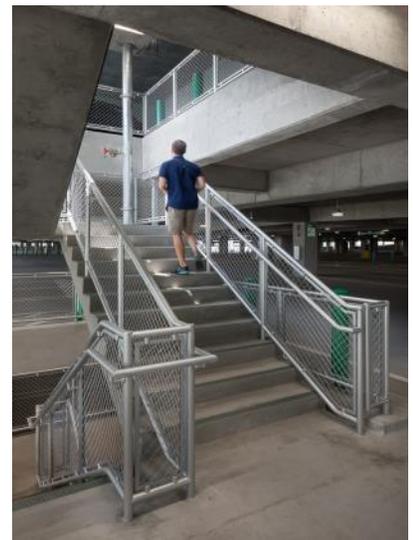

Infill: 2x2" Steel Diamond Wire Mesh

Architect: HKS Architects

Contractor: Raydeo Enterprises

Raydeo Enterprises of Ballground, Georgia was chosen by Holder-Austin-Moody-Bryson, a joint venture of Holder Construction Group, Austin Commercial, Moody Construction Co. and Bryson Constructors to complete the railing construction for the Atlanta Hartsfield-Jackson newest parking deck. The seven-level parking deck was constructed to accommodate 5,200 to 6,000 vehicles, which included an elevated walkway connecting to the Georgia International Convention Center and SkyTrain automated people-mover station. The architect of record, HKS Architects reimagined the typical parking deck facility with an inviting, sleek and modern look, that incorporated the Hollaender Interna-Rail® railing system with a functional and safe, yet design-oriented mesh infill panel. Hollaender's system integrated attractively into the architect's vision, but also was the perfect assembly and installation choice for the Raydeo team. The mechanically fastened Interna-Rail® system provided the Raydeo installation team the flexibility to overcome varying mounting conditions within a post-tensioned concrete system. They were able to assemble and install quickly due to Hollaender's ability to deliver up to 24 foot pre-fabricated sections of railing.
